

# GoldMine Premium Edition

## Version 8.5

### Release Notes

Updated March 26, 2009

#### **WHAT'S NEW IN GOLDMINE PREMIUM EDITION 8.5**

GoldMine now supports **32-bit and 64-bit versions of Windows Server 2008**.

GoldMine now supports **Microsoft SQL Server 2008**.

GoldMine now supports the **64-bit version of Windows Server 2003**.

**Universal Search** provides a single search box from which you can find contacts, notes, activities, e-mail messages, documents, and other items in GoldMine. This new feature is located at Go To > Search > Universal Search.

**GoldMine Integration Services for Microsoft Outlook (GISMO) is now included in the GoldMine installer**, no longer requiring a separate installation.

**Cross-field validation** enables an F2 lookup list to change based on the value in another field. For example, you can enter a value for the Title field that is only valid for a specific Department. To enable this option, click the Setup button in the Field Lookup (F2) screen and select "Lookup list depends on another field". Check the "Force valid input" box to enforce the validation.

A **Preview Pane** is available in the tabs within a contact record, providing a faster view into activities, e-mails, details, and linked documents.

**Unattended installation** enables GoldMine to be installed or upgraded without end-user intervention. To enable this option, check the box labeled "Create configuration file for unattended installation" when installing GoldMine on an end-user's computer. Then place the gmsetup.exe, gm\_is.ini, and gmsetup\_si.bat files into the same directory on another end-user's computer, and execute the gmsetup\_si.bat file to install GoldMine.

In addition, future workstation **upgrades can be setup to install automatically**. After installing GoldMine on a server and creating the files listed above, go to Tools -> Configure -> System Settings -> Upgrade and enter the paths for the files. This automatic upgrade process will take effect in releases after GoldMine Premium Edition 8.5.0.

As a result of the changes described above, the Minimal Setup and option was removed from the GoldMine installer and the Install Locally option was removed from the License Manager.

The **E-mail Center and Opportunity/Project Manager user interfaces** have been redesigned for better usability.

Secure **SSL connections** now are supported in the E-mail Center. To configure an SSL connection, go to Edit > Preferences > E-mail.

The **IMAP** protocol now is supported in the E-mail Center, providing more security and better interoperability with other e-mail clients. To configure an IMAP e-mail account, go to Edit > Preferences > E-mail.

A new **System Settings** screen is available for administrators to establish global system settings for search performance tuning and other items.

**Unicode database** support enables multiple languages to be stored within a single GoldMine database. This option is available when installing, upgrading, or rehosting GoldMine. Note: selecting this option will significantly increase the size of the database.

New user settings are available for administrators to permit a user to **Insert notes, Edit/delete own notes, and Edit/delete others' notes**. These permissions can be set by clicking on Tools > Users' Settings > Properties > Access.

A new user setting is available to grant **permission for end users to customize their toolbars**. To prevent end users from customizing their toolbars, go to Tools > Users' Settings > Properties > Access and uncheck "Customize toolbar".

The GoldMine Lookup Wizard now enables users to **look up contacts matching multiple fields within Details**. To use this feature, click on Tools > Filters and Groups > SQL Query > Build... to launch the wizard, and then select "Contact Information" and "Contacts containing the following Details tab information".

A new **Pending RSVP folder** is available in the Activity List, displaying the pending activities for which the user has requested notification via RSVP.

**Additional configuration options are available in the Service Center.** Category, Offering, and Origin now are optional columns to be displayed in the case list view. Case field labels also can be modified by users with master rights.

**A single case can be associated with multiple contacts**, using the new Contacts tab displayed in the case view. With this feature, activities and e-mail messages associated with multiple contacts also can be linked to the same case.

**When a case is reassigned, escalated, abandoned, or resolved, there now is a History entry** that indicates what occurred. This history is viewable from the case or from the primary contact for the case.

GoldMine includes new tools for managing relationships between records in your database. To set up relationships between records that already are in your database, use the new **relationship tree builder** at Tools > Data Management > Create Default Relationship Trees. To add relationships as new records are created, check the **"Relate To" box** when adding a new record. The section name used when creating a new record can also be set by record type (Tools > Configure > Record Types, select a record type, click Edit, and enter a **Relationship Tree Section Name**).

The **updated column chooser in the Contact Search Center** now includes the ability to display the contact's e-mail address and web site as columns in the Search Center and Contact List views.

Users now can run a **single search for primary and additional contacts within the Contact Search Center**. To use this option, select Search by: Contact (primary or additional).

**Individual activities can be printed** or copied to other applications. To print or copy an activity, right-click on the activity and select Output To.

The Field Properties screen has been redesigned to **simplify the process of changing global field labels**. To access the previous settings, including the ability to define a local label specific to a contact set, click the More Options button on the Profile tab of Field Properties.

The user interface for **scheduling an activity with multiple contacts** has been redesigned to be easier to use and more powerful. To add multiple contacts to an activity, click on the search icon next to the contact field on the Activity Detail tab. By default, the activity will be set at the same time for all contacts. To make the activities occur in a series, select the Series tab and choose "Schedule a series of activities with different times for different contacts".

Activities now can be scheduled based on a maximum number of activities per day, or based on fixed activity duration. In addition, a "wrap up time after each activity" can be used to provide a delay between the completion of one activity and the beginning of the next activity.

## **WHAT'S ENHANCED IN GOLDMINE PREMIUM EDITION 8.5**

**Keyboard navigation** has been enhanced to provide better access to core product features without using the mouse.

**Synchronization and database rehosting performance** has been enhanced, especially when using the Firebird database.

**The 2 GB size limit has been removed** for synchronization transfer sets and installation files for one-button synchronization.

**Concurrent GoldSync connections are queued** to improve reliability. As users connect to a GoldSync server, they automatically are placed in a queue, up to the number of users established in the Number of Connections screen within GoldSync configuration. If simultaneous processing of concurrent connections is required instead of queuing, please contact your Solutions Partner or FrontRange Support Services for recommendations and instructions.

**E-mail messages sent when viewing a case are automatically linked** to the case. While viewing a case in the service center, click on Actions > Send E-mail Message in the top menu bar.

The **Linked Document Mover** has been enhanced with the ability to restrict the locations from which documents will be moved. This feature is available at Tools > Data Management > Move Linked Docs and Attachments.

The **Details tab now provides 12 customizable fields** for each type of Detail. Previous versions of GoldMine provided 8 customizable fields for Details.

The import and export wizards now have **simplified support for comma-separated (CSV) files**. To import a CSV file, click on File > Import and Export > Import Contact Records.

**Automated Processes can create cases**, using the Create Case action in Event Properties. To create or edit a process, click on Tools > Automated Processes > Manage Processes.

For consistent terminology, the Tracks tab has been renamed to **Processes**.

The sort order of records displayed in the Contact List and Contact Search Center can be synchronized to allow users to **scroll through records in the same order as they are displayed in the Contact Search Center**. To enable this option, right-click on the results in the Contact Search Center and select "Set Record Scroll Order".

The **Contact Search Center supports the percent symbol (%)** as a 'wildcard' for matching partial names of contacts or companies.

**Macros can be added to custom toolbars**. To use macros, first add the macro buttons (Record, Edit, Stop, and Pause) to the standard toolbar by clicking on the down-arrow button at the right end of the toolbar, and clicking on each button. Click the Edit button to view existing macros and drag-and-drop them to a custom toolbar.

**Notes are now stored in a dedicated NOTES table** for better reporting, auditing, and data synchronization. Previous versions of GoldMine combined all notes for a contact in a single field.

Because of this new structure for Notes, GoldMine does not support Global Replace on notes or filters based on notes. However, Universal Search provides similar functionality, as it enables the user to search within notes and then use the list of matching contacts as an active filter. To do this, check the Advanced box in Universal Search and select Notes as the only item within "Find these items". Enter the search term and click Go. Check the box in the Tag column in the first row of the search results. Scroll to the bottom of the search results and shift-click the Tag column in the last row. This will activate a contact list of all the contacts with notes that include the search term.

**A cancel button has been added to the toolbar that appears when editing notes** for a contact record. To cancel the entry of a note, click the red X that appears in the Notes tab.

**The Tasks folder of the Activity List now shows the related opportunity, project or case** and enables the user to navigate directly to it, by clicking on the link shown in the Regarding column.

The **Fax field in the Additional Contact record can be relabeled** for use as a Mobile number or for storing other data. To change the label of this field, include the following entry in the [GoldMine] section of the gm.ini configuration file: AddContactFaxLabel=[yourlabel]

Users can now **cut, copy, and paste field data with a right-click** on the field. In previous versions of GoldMine, right-clicking on a selected field would display the lookup list for the field. To display the lookup list, press F2 or the Application Key (on most keyboards, this is a button with a picture of a drop-down menu). In addition, the auto-complete feature is activated when a user begins typing data into a field, as an alternative to opening the lookup list window.

## **WHAT'S FIXED IN GOLDMINE PREMIUM EDITION 8.5**

ID #	Issue Description
96767	When editing the alarm time for a previously scheduled Event, the alarm time changes back to 12:00 am
96130	When replying to some HTML e-mails sent from Outlook 2007, the replied text is truncated from the e-mail
96007	Auto-complete enters the wrong field value if the selected lookup list entry contains a semicolon
95688	If the file attribute "A" (Archive) is not set on the transfer set file, the file is not downloaded by the remote and is not deleted from the server
95298	Data is not rehosted from dBASE database for user-defined fields with field name in 'u_' format
95283	When a Forecasted Sale has been scheduled, you cannot edit the Forecasted Sale to change the Contact to an Additional Contact
95203	Scheduled For date in History tab is different from the scheduled date of the activity
94941	When selecting a different group in the Groups tab via filter on Group Name column, group members do not refresh
94915	Contact record window not syncing with the Contact List window when you scroll to the bottom of the contact list window then back to the top again
94771	When creating a new contact while linking an e-mail, the phone number is always in USA format
94632	Real-Time folder doesn't have a preview pane
94620	Opportunity sales summary is missing from completed opportunity
94508	Text in 'Send request with appt' dialog says to click 'OK' but the actual button label is 'Add'
94209	Contact with Notes Tab report prints notes upgraded from 6.7 with long date in a continuous line
93989	Alarms are set incorrectly for activities scheduled for multiple contacts spanning multiple days
93828	When correcting the spelling of a manually selected section of text, incorrect characters are replaced
93814	Ext field value truncated after autofill
93717	Search for phone numbers with only one character does not return results
93728	Unrelated history items are shown after deleting history record within rolled up relationship tree
93598	Automated Processes not executed in order of designed event number
93451	Web Import template created with Perl script when CDO is selected
93449	With 24 hour format unchecked, GoldMine will still show in 24 hour format based on Windows settings
93440	Editing the view below the contact list can corrupt the view on contact tabs
93319	Notes fields aren't shown for some reports
93072	Case becomes unlinked from contact after merging contacts
92845	Activity code and Result code fields do not have lookup list in Statistical Analysis
92629	Selecting to E-mail Contact from a calendar activity linked to an Additional Contact creates email to Primary Contact instead of Additional Contact
92597	If contact record is put into group by more than one user, neither user can remove it
83611	GoldMine closes with no error when selecting Tasks tab for Opportunity Template if Task Dates To Be Based field is not populated in Template Properties
83449	Change to document extension causes corruption in attributes of synchronized document
83344	Incomplete documentation on automated process option "Attempt to trigger only once"
83262	Template loses HTML formatting when switching from primary to additional contact in

To: dropdown.

83259 Extra spaces shown on Recently Viewed list for converted additional contact

83158 "%3E" appears after recipient e-mail address after adding multiple CC recipients with friendly names on Vista

83142 E-mail attachments not moved from TEMP directory on the last day of a month or the beginning of a new month

83081 Automated process prints documents for incorrect contacts

83010 If GoldMine is minimized and an alarm appears, if the user selects "View Contact", GoldMine will not "restore" to show contact

82910 Automated Process is not merging documents in expected order

82832 Change in user's access settings not synchronized to remote

82791 Automated process prints documents for incorrect contacts

82650 Forecasted sales for other users are completely hidden from user when access to others Calendars is removed

82637 Slow loading of custom screen with large number of custom fields

82611 Changes to a contact record name will not apply when scheduling activity

82567 Pasting into the activity notes field adds a carriage return

82554 Web Import fails when using Exchange 2007

82542 Lookup Wizard truncated field to 20 characters in SQL query

79113 CSV export does not include Notes and saves as .txt file

79085 Process Monitor interrupts user the first time auto retrieve is processed after logging in

79084 Re-Link button on toolbar always moves the e-mail address to the selected contact

79080 Inconsistent logging of field history changes

79074 Inconsistency in Lookup lists when completing calls within one Call Type after changing the Call Type in the Completion window

78980 Frequent synchronization using MS SQL 2005 causes event logs on the remote: 'Cannot create new connection because in manual or distributed transaction mode.'

78955 Line breaks removed when editing a note

78952 Blank date fields rehosted from dBASE database shown as 12/30/1899

78980 Frequently synching on MS SQL 2005 causes event logs on the remote: 'Cannot create new connection because in manual or distributed transaction mode.'

78898 Document merge in literature fulfillment printed for incorrect contact record

78894 Unable to search on full e-mail address if its over 40 characters

78740 Cannot add a contact to relationship tree using look up an existing contact lookup with E-mail as search criteria

78631 GM+ View is visible when scrolling through Semi-partial curtained records (tabs hidden)

78548 When printing emails, there is no indication of an attached document

78512 Sync logs in GoldSync Administration Center show incorrect site name

78466 Forecasted sales analysis cuts off large numbers

78464 History/Pending tab with large number of records does not show most recent history on first sort

78456 Sync to Outlook doesn't display the contact name in Outlook's calendar

78451 When recording macro, tabs cannot be opened by keystrokes

78450 Log this alert in history...' option appears unchecked even when active

78447 Arabic characters are displayed incorrectly in the contact search center

78423 When scrolling through an active filter, record count changes and an ADO Error is generated in the Windows Event Viewer

78388 Public group not available in drop-down list for the "add to group" action in automated process

78124 E-mail message with 1000 continuous characters generates "i500 5.5.0 Syntax error -

- line too long"
- 78117 Until contact search center is refreshed, user-defined fields are displayed with a maximum of 25 characters
  - 78076 Forwarded message body does not show all GoldMine E-mail recipients
  - 78004 Projects window is not retained between user sessions
  - 77897 After scrolling past 1000 e-mail messages in the History tab, user cannot open an e-mail message
  - 77859 Sync Spy truncation on Vista
  - 77843 Single-character field appears too small in SQL query results
  - 77825 Completed sales by user ignores cents (only adds whole dollars)
  - 77813 Document name with over 35 characters is truncated on linked documents
  - 77763 GM+View template containing &emailaddress causes application error if active when launching GoldMine
  - 77734 E-mail template sent to a filtered group will only merge the information of the current contact
  - 77709 Option to send a meeting request update is re-activated after user unchecks the option
  - 77688 Forecasted Sales of amount/price of xx.74 will automatically be reduced to xx.73 (for 64 < xx < 82)
  - 77678 New Record creation via Referrals tab context menu causes application error
  - 77539 Activities scheduled with a "Notification" but NO Alarm are still sending an Alarm to the scheduled user
  - 77507 Incomplete documentation on Service Center
  - 77469 Plain Text e-mail allows HTML text to be pasted in
  - 77446 dBASE expressions are not respected in signature file
  - 77442 Calendar refresh in outline view causes GoldMine to take focus from every other application
  - 77357 Incorrect results when sorting on Age column in opportunity manager
  - 77246 Case History tab sort is not most recent at top and does not remember user selection
  - 77230 Error message: Cannot insert duplicate key row in object 'dbo.HISTORY\_ITEM' with unique index 'HISTITSEL'
  - 77154 Office documents (Word/Excel) added via hyperlinks cannot be seen in GM+View Tab
  - 77150 'Remember Lookup By' does not work when clicking Search button with CSC open
  - 77099 Notes print from earliest to latest
  - 76926 Missing CAL record message appears when syncing a "draft" e-mail to the server
  - 76865 User defined fields are not populated in Contact Search Center when searching by a Filter or Group
  - 76861 Some options in context menu become inactive in CSC when scrolling down more than 1000 records with activated filters
  - 76815 Export wizard truncates secondary contact e-mail addresses to 35 characters
  - 76767 Special characters are not showing correctly when receiving e-mails
  - 76765 E-mail History reference text longer than 20 characters is truncated
  - 76586 GoldMine automatically displays the date format from the Windows regional date settings
  - 76565 When printing the "Contact with notes" report, the notes are listed with the oldest date first
  - 76481 Report with large history record only showing 'Notes' information on first page
  - 76396 Title is incorrectly displayed for additional contact added as Influencer when field is empty
  - 76189 Leads Analysis does not show values when table name begins with numbers or contains blanks
  - 76075 Merge & Edit do not give a message that GoldMine Plus for Microsoft Word is not

installed

76071 Filter counts correctly but does not show correct numbers in search center

76022 Free/Busy tab when scheduling activities falsely alerting of a conflict

75803 Result Code checkbox is always disabled in graphical analysis

75802 F2 lookup is empty for second filter condition added in the contact search center

75784 Hot key for Mark as Private does not check box in Schedule an Activity window

75742 Upgraded data does not have appropriate friendly name associated to email address of additional contact following merge.

75736 Clone of closed-won opportunity creates too many opportunity records

75710 Unable to use Office Link (Word) with Vista - User Account Control (UAC) Enabled

75699 Application error when using alarm notification taskbar setting in GMPE

75633 INSERT INTO error when converting an additional contact to a new record

75591 If laptop user has an active filter, a saved sync wizard profile will update to the active filter instead of its saved settings

75585 After creating a macro with keyboard shortcuts, the edit macro button is grayed out on the toolbar

75546 If CSC is opened with no value entered and operator that does not require a value is selected (Is Empty or Is Not Empty), search does not trigger

75532 When filtering a Group of contacts, only those records in the first 500 display unless the entire list is loaded prior to filtering

75513 Label customizations in the opportunity manager are not respected in the opportunity tab on the contact record

75452 SQL temp tables created when creating new record do not consistently drop

75364 If multiple detail names begin with the same characters, then entries for the detail with the longer names will display on the custom tab for the detail with the shorter name

75335 GSSITES table rebuilds itself every other time GMPE is launched on Vista

75329 Process Monitor window can get saved off the screen, making it inaccessible

75300 Contact search center does not show all data after resorting by a column header

75207 Contact notes saved to a wrong record using 'Recently viewed' list

75096 Data not populated correctly in Adobe document

75073 Dates on the navigation pane calendar do not display in bold font for days with Events scheduled

75001 Sorting a group does not retain the sort order when scrolling through the contacts record in the active group

74987 While editing a SQL query, if an alarm pops up, the text in the SQL query box gets erased

74973 Unmarked button available in Process Monitor Window - "close when all processes are done"

74957 Selecting 'options' for a calendar report actually opens the 'profile' tab instead of the 'options' tab

74893 Scrolling by Company via arrows does not display all records seen in Contact Search Center

74847 Double click on e-mail button in the toolbar causes GoldMine to become unresponsive

74834 Using the mouse wheel when editing a contact note changes contact record in view

74831 "Start time cannot be empty" message appears when scheduling an activity to a group without spanning across multiple days

74816 Macro icons cannot be reused for different users with different macros

74647 When viewing another users preferences, the "Full Name" value is taken from the logged in user

74547 Notes are saved to a wrong contact if arrow buttons are used while typing a note

74489 Notes upgraded from GoldMine 6.7.70226 are incorrectly formatted

74380 Activities are duplicated in the activity list, when viewing data for another user with activities scheduled against curtailed records

74292 Cannot activate a Group and a Filter at the same time

74282 Time Clock sorts by day of week instead of day of year

73992 Sync with Outlook profile does not save mapping settings or respect the setting when deleted

73991 Information on the bottom status bar does not update properly when sorting by different criteria

73990 User toolbar settings documentation update

73989 When searching on Company is not Empty, nothing comes up

73988 Issue seen when editing the pending activity that is created by escalating a case

73987 Idle time logout is not configurable on Vista Machines

73955 Lookup.ini is not respected when new contacted is created via gmxmlapi

73893 Military time is displayed in opened e-mail message

73842 Command Line parameter -a does not allow user to enter GoldMine username

73807 MSSQLMaxBrowseRecs setting no longer affects Contact Search Center Searches and results in inconsistent query against CONTSUPP table

73769 When adding an influencer or team member to an opportunity, an unrelated contact record will open

73768 When creating New Company and Contact, doesn't check for duplicates the first time

73666 When a group member is deleted from Groups tab in Filters and Groups screen, the screen refresh moves you back to the top of the list

73494 Default Sort for Opportunities is Account descending

73490 When adding cc to email, sporadically receive error Runtime Error! [path to \gmw.exe] R6025 - pure virtual function call

73472 If service case mask is changed to ##### , pending activities disappear when edited

73438 When a detail is deleted, the screen refreshes and moves you back to the top of the list

73433 Unable to delete books with no name from Knowledge Base

73407 Import Wizard does not respect [Autoupdate] section of lookup.ini with option to do so selected

73398 Unchecking the group option in the History tab does not release the group

73363 Recently viewed items do not sync with the main opportunity manager window

73351 Sale amount is doubled when you complete a sale from the opportunity pending tab

73298 Linked Documents default sort is by date in ascending order

73151 User can't scroll beyond a certain number of history records with filter applied

73149 When you type in a zip code for a newly created contact, the field doesn't auto fill

73146 Renamed folder in knowledge base can become non-editable

73120 cannot re-enable menu item once deselected for non-master user

73110 'Adding Contact to an Existing Company' Help topic is incorrect

73032 ZIP code lookup activated after single character of ZIP code is entered for additional contact

72911 Only one e-mail address is moved when converting an additional contact to primary

72864 Fields to insert don't show up in order by Contact 1 or Contact2

72788 Sync Service does not respect Sync Settings

72737 Classic menu causes GM toolbar to be reset to default every time the user logs in

72695 Alarms associated with activities that auto roll-over are not updated to match activity date

72684 Zoom / previous option does not allow you to scroll through all history records in history tab

72636 Scroll order for activated filter does not respect Optimize Sort Order field

72610 Date field corrupted in new record dialog

72601 Follow-up activity from email linked to case is not automatically linked to the case  
72284 Address2 field not populated when retrieving linked document  
72160 Cannot import VCard after Web Import is configured  
72028 GoldMine Hangs and freezes when editing a project from the project management centre  
72015 User without scheduling permissions can schedule activities from search center  
72000 Address & Phone Report with sort on Contact2 field run against a filter does not return all records meeting filter criteria  
71972 Scrolling messages in Inbox also scrolls messages in Inbox sub-folders  
71892 When selecting to print a report, Category field displays as Contact even if Report listing is for another Category  
71891 Linking non-linked activities on completion window will not link activities although User has possibility to do so  
71890 Clone Crystal Report does not create a copy of existing report. Clone function behaves like New function  
71872 Unable to install GM if there is more than one SQL instance on the system  
71853 When deleting a resolution note in Cases, the note is removed from the UI, but still appears in the database with ~~Deleted, instead of removing the note completely  
71737 Date format in contact list is different from contact record  
71598 Outlook calendar records deleted with synchronization  
71519 User can only look at 2 emails from the activity list before they are forced to close the window  
71517 Closed amount is being assigned to opened opportunities - amount does not even match forecasted sale  
71352 Outlook contact deletions do not sync  
71286 Error message when opening RDP file from links tab  
71268 Linked Document Mover only supports a single path  
71265 Outlook Sync does not respect New Record Ownership settings  
71205 Automated process elapsed time trigger is ignored  
71134 Cannot send a meeting request to multiple contacts  
71113 Memory leak caused by Relationships tab  
71108 Search entered in box automatically searches by first name only  
70977 Incorrect lookup lists displayed for Reference when completing activity  
70934 Refresh issue: The window title does not change to reflect that it is now searching by company  
70930 E-mail sent from KB does not include attachment  
70693 Cannot vertically scroll the Gantt chart  
70641 Old GoldMine Setup File used in one-button installation  
70469 On Edit menu, Copy, Cut and Paste are always grayed out  
70414 Ability to add multiple contacts to relationship tree  
70280 Phone number for Contact Info pasted into Pager Message is incorrect  
70279 Option to send e-mail to user when alarm not acknowledged does not work  
70277 Task focus lost after editing task  
70276 Unlinked e-mail shows in sent folder as linked e-mail  
70269 The import wizard will not import data from a field larger than 50 characters  
70136 Text search on primary fields, there are inconsistencies... unless the key word is the first word in the field search can fail.  
70103 Can't see opportunities or projects in Activity List when clicking on open activities  
70059 Project task created for a user group to not show in the activity list  
69990 Project Template tasks dates are not respected when creating a task for a new project created from a template

69960 Documentation does not include information regarding SQL protocols/enabled order for client workstations

69941 Automated Process does not trigger all events and sequential order of events is not respected

69910 Slow response during Relationship tab refresh

69820 Service reports do not appear in Print a report..." wizard"

69719 Auto populate of city and state not working when creating new record

69679 Default path is incorrectly displayed in the installer after browsing to a previous installation

69648 Amount field rounded incorrectly if it exceeds 8 characters when sale is completed

69603 Importing notes does not merge to the existing note

69602 Word Merge bottleneck in automated process execution

69595 Status drop-down list does not refresh when switching between Project and Opportunities

69594 Last Record button jumps only 500 records, and not to the last record as indicated

69555 'Refresh' button is always inactive in activity list

69469 Text formatting lost in notes after upgrade

69261 E-mail is linked to the wrong contact after an alarm pops up

69183 Contact Search Center settings ignored when creating a new case

69149 Case number identity seed is ignored

69101 User without merge permission can access merge & edit in Document Management Center
